Method

ewise exponential models for the transition to first leaving home is counted from the R's 15th birthday to the time of leaving home at the first interview and by the R's 40th birthday. Time is measured

The following covariates are included in the models: political party affiliation, place of residence up to 15 age; number of children, quality of relationship between parents up to 15, father's and mother's education. Time-varying covariates: calendar period, R's educational attainment
